

OwnYit

IT Infrastructure Management Simplified

- **Manage IT Infrastructure** in near real time to preempt issues before they happen
- **Complete Hardware and Software Inventory** details of each endpoint
- **Policy Enforcement Add-On** to define and deploy Policies in the entire organization.
- **Patch Management Add-On** to identify and deploy missing patches in the system
- **Anti Virus Add-On** for protecting system from the viruses, malware and known sources

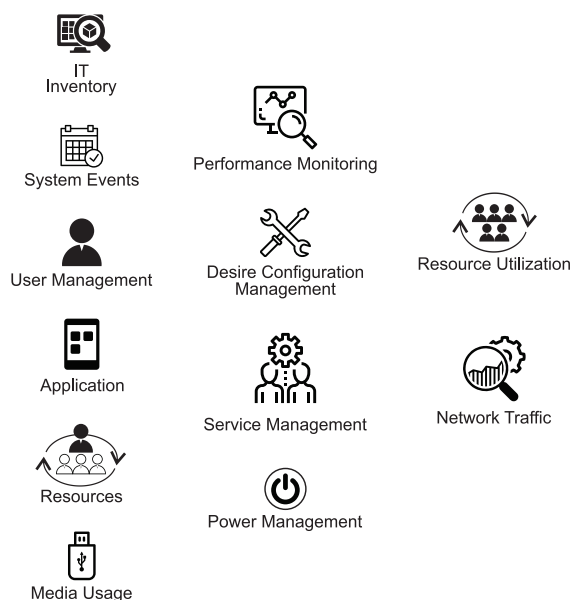

Do you want to do manage your IT infrastructure? OwnYit collects data from the system including hardware & software inventory, performance, resource utilization, network traffic. OwnYit empowers you to monitor and analyse the data to discover powerful insights across multiple cases like IT inventory, IT operations, Policy enforcement and Application monitoring giving you valuable intelligence across your entire organization.

With OwnYit, everyone among system administrator or IT manager or Business users can manage their IT infrastructure. Whether you are looking for IT asset management, resource monitoring, application controlling, remote management & audit, OwnYit can help you there.

OwnYit. Any Industry. Any Use Case.

Across the enterprise, there is untapped value in the machine data/logs generated by your IT infrastructure systems, devices and applications. Hidden in this data/log is the operational intelligence. You need to collect the operational intelligence & verify this against your IT policy to guarantee your cyber Security. Whatever your business challenges, OwnYit will simplify your cyber security & enhance your cyber posture.

IT Inventory and Change Management

Near real time alerts of any hardware and software changes in the system get software license key information etc. Inventory report is available on demand. Verify the actual software licenses installed in the network against the licences purchased. Get actual real time of your IT assets.

Policy Enforcement Add-On

Easily define and deploy Policies & Rules for the use of hardware, software, applications, devices (Storage, PDAs, modems, and etc) in your IT Environment. Define Policies for monitoring and managing authorised software in your network.

Patch Management Add-On

Centralized console to assess missing patches & system vulnerabilities. Easily deploy all missing patches & remediate vulnerabilities from a central console.

Anti-Virus Add-On

Antivirus system for protecting your IT network from infection by viruses, malicious software or malware. Ability to scan inbound and outbound data & email for infected attachments and malicious content. No need to buy /purchase additional Anti-virus software.

An Enterprise-Grade Analyst Platform: Performance, Scale and Management

OwnYit collects hundreds of data/logs everyday from each system, to meet the needs of IT infrastructure Management for an organization. At the same time keeping your data secure with role-based access controls, secure data handling, auditability and assurance of data integrity.
