### Product Brief

Do you want to manage your IT infrastructure? EPMS collects data from the system including hardware & software inventory, performance, resource utilization, network traffic. EPMS empowers you to monitor and analyze the data to discover powerful insights across multiple cases like IT inventory, IT operations, policy enforcement and Application monitoring giving valuable intelligence across your entire organization.

With EPMS, everyone among system administrator or IT manager or Business users can manage their IT infrastructure. Whether you are looking for IT asset management, resource monitoring, application controlling, remote management & audit, EPMS can help you there.

### EPMS. Any Industry. Any Use Case.

Across the enterprise, there is untapped value in the machine data/logs generated by your IT infrastructure systems, devices & applications. Hidden in this data/log is the operational intelligence. You need to collect the operational intelligence & verify this against your IT policy to guarantee your cyber security. Whatever your business challenges, EPMS will simplify your cyber security & enhance your cyber posture.

Policy Enforcement

Patch Management

# IT Inventory & Change Management

Near real time alerts of any hardware & any software changes in the system get software license key information etc. Inventory report is available on demand. Verify the actual software licenses installed in the network against the license purchased. Get actual real time of your IT assets.

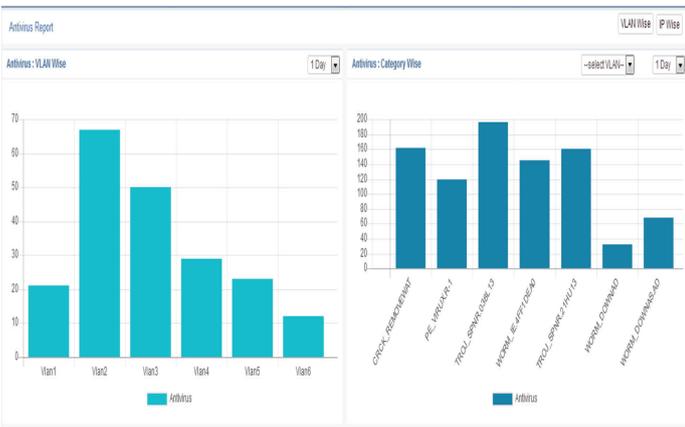

# Policy Enforcement Add-On

Easily define and deploy policies and rules for the use of hardware, software, applications, devices (storage, PDAs, modems and etc) in your IT environment. Define policies for monitoring and managing authorised software in your network.

# Patch Management Add-On

Centralised console to assess missing patches and system vulnerabilities. Easily deploy all missing patches & remediate vulnerabilities from a central console.

# Anti-Virus Add-On

Antivirus system for protecting your IT network from infection by viruses, malicious software or malware. Ability to scan inbound and outbound data & email for infected attachments and malicious content. No need to buy / purchase additional Anti-virus software.

# An Enterprise-Grade Analyst Platform: Performances, Sclae and Management

EPMS collects hundreds of data/logs everyday from each system, to meet the needs of IT infrastructure Management for an organization. At the same time keeping your data secure with role-based access controls, secure data handling, auditability and assurance of data integrity.
