

# OwnYit VAPT

VULNERABILITY ASSESSMENT SIMPLIFIED

www.tectonas.com

## TectonaS

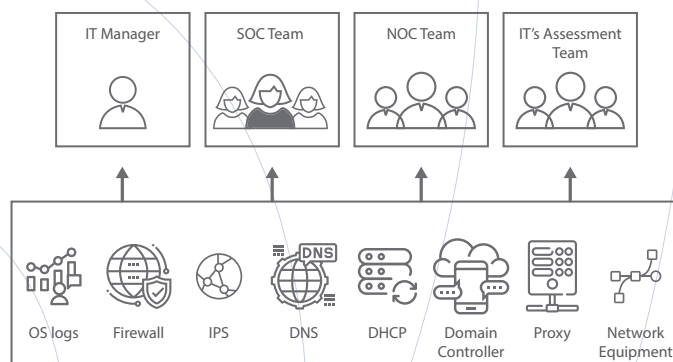

- Evaluate any IT system for vulnerabilities
- Mitigate vulnerabilities in real time to preempt issues before they happen
- Penetration testing, to identify Vulnerability that cannot be detected using standard VA tools
- Strengthen Cyber Defence by plugging the Vulnerability

### Product Brief

Do you want all the vulnerabilities in your IT infrastructure **PLUGGED**? OwnYit VAPT **AUTOMATES** Vulnerability assessment of your IT and provides information to plug these vulnerabilities. And, additionally it can do full **PENETRATION TESTING** of your IT infrastructure.

With VAPT, you can streamline and automate the IT Vulnerability -> Assessment, Mitigation and Penetration Testing to secure your IT systems whether you're looking to troubleshoot IT, address your IT vulnerabilities or reduce your IT costs due to exploits, VAPT delivers this for you.

**Structured Vulnerability  
Assessment with  
Penetration Testing.  
Any Industry. Any Use Case.**

Across the enterprise, there are a number of undetected vulnerabilities that are added by the systems, system patches and user behavior. These vulnerabilities allow your IT to be exploited by Internal and External entities. VAPT helps you plug these vulnerabilities in an easy and effective manner.

## Effective Vulnerability Assessment

VAPT can perform 360-degree assessment of the IT systems to identify all vulnerabilities of the systems. These vulnerabilities are then collated and normalized for easy storage & future analysis.

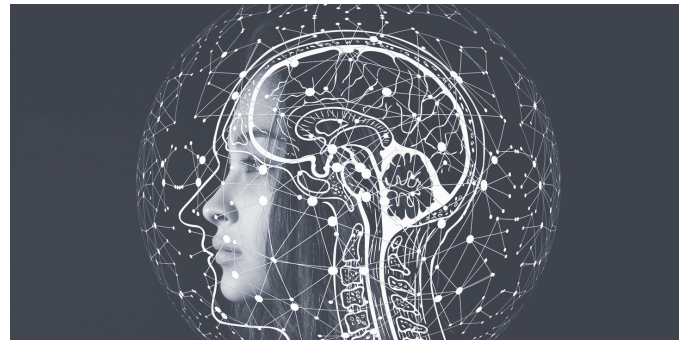

## Automated Penetration Testing

Multi-tier automated penetration framework to probe the network for vulnerabilities that are not detected using standard vulnerability assessment mechanism.

Think of it as having your own in-house hacker that is available on a click of the mouse.

## Collect and Index Vulnerability Assessment Data

VAPT has an efficient framework to collect and index the vulnerability data. The data can be indexed for temporal analysis. The vulnerabilities can also be benchmarked to previous data allowing IT managers to see if vulnerabilities have increased or decreased with time.

## Machine Learning Premium solutions

Extend the power Vulnerability Assessment. Premium machine learning plug ins are available that are easy to deploy and visualize. Solutions combine real-time analytics to identify vulnerability assessment and root cause analytics systems, to rescue your IT operations.

## An Enterprise-Grade Vulnerability Assessment Platform: Performance, Scale and Management

VAPT can scan 1000s of systems per day, it is light on your IT resource, yet complete. All of this while keeping your IT systems secure. VAPT has inbuilt engines to deliver automated machine learning plug-ins on demand. This makes the deployment and scalability of VAPT easy and configurable.
